Research interests. I study what quantum algorithms really cost and when they are worth it: making algorithms such as Hamiltonian simulation cheaper on fault-tolerant hardware, proving how many T gates and ancilla qubits any circuit must use, and understanding when quantum approaches can genuinely outperform classical algorithms.

Education

Imperial College London **Sep. 2026 – Sep. 2027 (expected)**
MSc, Physics with Quantum Dynamics *London, UK*

Carnegie Mellon University **Aug. 2023 – May 2026**
B.S. in Computer Science; ML and Algorithms & Complexity concentrations *Pittsburgh, PA*

- Graduated with University Honors. Relevant coursework: Quantum Computing, Complexity Theory, Learning Theory, Randomized Algorithms, Convex Optimization, Parallel Computer Architecture.

Research Experience

Institute for Quantum Computing (IQC), University of Waterloo **May 2026 – Aug. 2026**
Undergraduate Researcher (Mitacs Globalink Scholar), hosted by Michele Mosca and Vlad Gheorghiu *Waterloo, ON, Canada*

- Developed tighter T-count bounds for structured unitaries: polynomial-time lower bounds for diagonal Clifford+T gates, computed from the gate's phase polynomial and exact for layers of disjoint Toffoli-type gates ($6m + 1$ T gates) in the $\{\text{CNOT}, T\}$ model with clean ancillas. Single-author manuscript in preparation; presented at QRE 2026 and UnitaryCon 2026.
- Paired the floor with an $O(n^3)$ upper bound that brackets every gate; the bounds carry over to Toffoli networks and finite-field multiplication oracles, certifying a published GF(4) multiplier optimal at 17 T gates.
- Completed USEQIP: quantum information coursework plus 30+ hours of hands-on experiments on IQC's quantum hardware.

Caltech Institute for Quantum Information and Matter (IQIM) **May 2025 – Aug. 2025**
SURF Undergraduate Researcher, Preskill group, with Samson Wang and James Watson (Google Quantum AI) *Pasadena, CA*

- Worked on early fault-tolerant algorithms for matrix functions, using commutator scaling to lower the cost of product-formula routines; written up as arXiv:2608.13862 and presented as a poster at TQC 2026.
- Joined a biweekly reading group on quantum signal processing (QSP) and quantum singular value transformation (QSVT).

BlueQubit **Oct. 2025 – Present**
Part-time Researcher and Hackathon Lead, AI and Core teams *Los Angeles, CA (remote)*

- Benchmarked GPU-accelerated MPS and Pauli-path simulators against AWS Braket, Quantum Rings and open-source backends; the runtime scaling study was released as a preprint and informed product decisions and simulator cost estimators.
- Lead student and community engagement: turn BlueQubit research into accessible, technically accurate blog posts and tutorials, and mentor students and judge the BlueQubit track at student quantum hackathons.

Quantum Technologies Group, Carnegie Mellon University **May 2023 – Jun. 2025**
Researcher with Sridhar Tayur *Pittsburgh, PA*

- Wrote a tutorial paper with five accompanying notebooks on posing and solving QUBO problems with QAOA and quantum annealing (*Tutorials in Operations Research*, INFORMS 2025, pp. 145–183).
- Implemented and tested semidefinite-programming formulations for entanglement detection using CVXPY, PICOS and Gurobi.

Algorithms Group, George Mason University **May 2022 – Jun. 2025**
Researcher with Fei Li *Remote*

- Implemented quantum string matching in Qiskit, benchmarked against Rabin–Karp and Knuth–Morris–Pratt (ACM AISS 2022).
- Built a hybrid quantum-classical algorithm for the traveling salesman problem on D-Wave QPUs that outperformed the pure classical and pure quantum approaches it was benchmarked against (IEEE IPDPS 2023).
- Designed three classical heuristics and a D-Wave hybrid algorithm for shipment rerouting, tested with up to 1,000 shipments on real transport networks (Chicago, Barcelona, Winnipeg) against classical solvers (JSSR 2024).

Publications

Manuscripts and preprints

Talks and Posters

- **UnitaryCon 2026** — talk, "Certified T-count floors for Toffoli networks and reversible circuits."
- **Quantum Resource Estimation (QRE) 2026**, Toronto — poster, same title.
- **IEEE QCE 2026**, Toronto — two first-author papers.
- **TQC 2026** — poster, "Resource-Efficient Quantum Eigenvalue Transform with Commutator Scaling" (PDF).
- **Quantum Leap Career Nexus**, University of Maryland, Nov. 2025, and **Caltech IQIM SURF Seminar**, Aug. 2025 — talks, "Early Fault-Tolerant Quantum Algorithms for Matrix Functions via Trotter Extrapolation" (slides).
- **INFORMS Annual Meeting 2025** — presentation on solving QUBO models on quantum computers.

Awards and Honors

- **IEEE QCE Student Travel Grant** (2026), IEEE Quantum Technical Community.
- **Mitacs Globalink Research Award and IQC Undergraduate Research Award** (2026), funding the IQC research term.
- **Duke STAQ NSF-funded Invited Scholar** (2025): week-long PhD-level seminar on quantum simulation, error correction and architecture with Peter Love, Kenneth Brown and Yu Tong, including a Duke Quantum Center lab tour.
- **MIT iQuHACK** (2026): 2nd, NVIDIA track, of 90+ teams; variational LABS with Pauli correlation encodings on GPUs.
- **YQuantum** (2025, Yale): Yale Quantum Institute Grand Prize; 1st place, Alice & Bob track; 2nd overall; Wigner-function quantum state reconstruction via convex optimization and convolutional-network denoising.
- **Citadel/Correlation One Datathon** (2024): 2nd of 150 invited from 3,000+ applicants; pairs trading, Sharpe 1.58.
- **HackCMU** (2023): Graduate Student Association Infrastructure Prize for Eco-Bin, an AI waste sorter piloted with CMU Dining.
- **Regeneron Science Talent Search Scholar** (2023), top 300 of 2,000+ applicants nationally.
- **Olympiads:** USA(J)MO qualifier, USAPhO Bronze, USACO Gold, USNCO National Finalist.

Leadership

CMU Quantum **Sep. 2024 – May 2026**
Founder and President *Pittsburgh, PA*

- Founded CMU's first student quantum organization and grew it to 200+ members and 10+ student leaders; secured sponsorship from General Motors and Boeing; ran workshops with IBM, IonQ and Quantinuum.
- Developed teaching materials (slides and handouts), led hackathon tracks, and organized sponsored research trips.

Technical Skills

Languages and proof tools: Python, Julia, C++, Lean 4
Quantum and optimization: Qiskit, PennyLane, CUDA-Q, D-Wave Ocean; CVXPY, PICOS, Gurobi; CUDA, MPI
